

## Customer's Feedback from prototypes shown.

1. It will be better to include colorful SDG (Sustainable Development Goals) tiles to improve look and feel of the project.
2. Using basket idea is great but we need to have more signifiers or animations etc, to guide the user what is the use of this basket.
  - Solution thought - A more relevant icon, an animation adding the project to the basket, etc. will do the trick.
3. Like icons can be changed to something more meaningful that shows comparison of the projects. As, it is more of a comparison than likes.
4. "SDG goals are better to have more description than numbers for those who are not familiar with goal numbers".
  - Solution thought - We will try to add balloons so that when the mouse is hovered over a goal number, the description of the goal is shown.
5. We can think of creating the users in future to store liked project information of the users. But this can be kept for future MVP's
