# RCE Projects and profiles page design

## Team members:

1. Amirhossein Motavali
2. Helly Shah
3. Lakshay
4. Vandan Chauhan

## Summarized project background & business need/opportunity:

Project idea is to have an interactive and easy to understand profile and project section interface for RCE Saskatchewan as per their requirement. Our focus is on creating a page with dynamic search which will make it easy for the users to find the relevant projects, and also can search for upcoming activities and events organized by the RCE.

The need for improving the section of website:

- Better/engaging experience : The plan is to modify the website's page so that whenever the user visits, they are engaged on the page and have a great experience before leaving the website.
- Search Bar : There should be a search bar which can make it easy for the user to find the project that they are looking for.
- Clarity : The little focus will also be upon a little more organizing the information so that it is easy to search and better to view everything related to projects and profiles section of the website.
- Contact information: the contact us button will redirect users to call or email to person for further information.
- Applying filter: the filters can be by the name of the project, year of the project, SDG's relation, region of the project, targeted community.

## Northstar and Carryover customers:

1. Volunteers: People who want to be part of the RCE and serve the community
2. Funders: People from government, private(corporate) organizations that might be approached to invest in RCE.
3. Educational institutes, health care workers, target community, SDG's workers etc.

## Project Assumptions:

- Resources : Amir, Helly, Lakshay and Vandan will be working on this project and we will require project data information to build the same.
- Technology : Wordpress, Word, Github and saskrce.ca will be required to gather information and implement.
- Scope : The expected delivery is a web page/web pages with information on projects, Search bar to search projects and contact information. Understandable interface which can be easily accessible by users
- Project information: the information which is available on the site is up to date.

## Project Constraints:

- Wordpress: As discussed, everyone in the team is having almost a first experience with wordpress. So, using it for the first time might be a constraint.
- Online Interaction: Due to Corona, the only way to interact with the teams is online. So this brings a lot of problems for every individual. It's difficult to find a common time to have meetings and discussions.
- Project details: the team will use the project details that are available online, and do not have deep details of the projects that are already done.
