Customer's Feedbacks from prototypes shown.

1. "The first and foremost important thing that I want the user to feel from visiting the website is that the user should feel WoW! So many great works are being done throughout whole Saskatchewan!"

2. Having a Calendar and even showing a timeline is not necessary at this point and could be left for other releases.

3. Don't pay much attention to the current/future events section

4. Site is run by volunteers and will not be checked frequently. Therefore, the information, forms and everything should not require continued administration from RCE Saskatchewan as the administrators don't have time for that.

5. Try to make the design as versatile as possible (so that it can be implemented on mobile as well as on desktop).

6. Site users might be anyone from researchers to school kids. The information should be easily accessible for everyone.

7. Incorporate SDGs because they're necessary

8. "Really good idea of filtering results, especially the awards one." The customer was pleased with the idea of filtering and showing the awards.

9. We had 2 different designs and provided both during the meeting. Carissa suggested integrating those prototypes considering the constraints for desktop and mobile versions.
